Power grid WeChat recharge electricity fee

The power grid, also known as the electric grid or energy grid, is a complex system designed to deliver electricity from producers to consumers. It includes a network of power plants that generate electricity, high-voltage transmission lines that carry electricity over long distances, and distribution lines that deliver electricity to homes and businesses.

The high voltage grid (approx. 77,000 km) transmits power at 60 kV to 220 kV and is used for the primary distribution of electricity to transformer substations in population centres or to large, energy-intensive companies in the industrial sector.

Energinet's activities are financed through tariffs. A tariff is a charge that consumers, producers and balance agents pay. Energinet's transmission tariffs and fees cover the costs of operation, depreciation, financing and administration. Tariffs are the rates that are used for consumption of the electricity grid in the settlement between Energinet and the electricity supplier.
