To whom is the photovoltaic (PV) guide applicable?

This guide is applicable to Clients planning or undertaking installation of Photovoltaic (PV) systems on 'Large Scale' buildings. These buildings are typically owned by organisations from the public or private sector, such as educational establishments, local government, a local community, or commercial organisations.

What guidance is there on the performance of PV systems?

The Good Practice Guide provides some guidance on the performance of PV systems in Section 4 of the updated PV Installers Guide. The PV Specialist should model the system using one of the software simulation programmes available, which have a 'library' of modules and inverters and can select the sunlight conditions most representative of the site.

What is a photovoltaic (PV) system?

At the heart of it all, a Photovoltaic (PV) system is an eco-friendly powerhouse that converts sunlight into usable electricity, allowing us to power our homes with renewable energy. This system is essentially your private power plant, harnessing the unlimited power of the sun and reducing our reliance on fossil fuels.

What is the purpose of the photovoltaic guide?

This guide is aimed at Clients planning or undertaking installation of Photovoltaic (PV) systems on 'Large Scale' buildings. The purpose of the guide is to provide guidance for organisations from the public or private sector, such as educational establishments, local government, a local community, or commercial organisations.

PV panel performance is exceptionally susceptible to shading. When shade falls on a PV panel, that portion of the panel is no longer able to collect the high-energy beam radiation from the sun. If that shading happens during the peak hours of operation (10 a.m. - 2 p.m.), the production of the panel can be greatly reduced.
