

Should we install solar power in old houses

Can I install solar on my home?

Installing solar on your home can cause older roofs to break or leak. It's important that your chosen solar installers thoroughly check your roof's condition before planning an installation. If you have an older house, your roof may not be in the best condition, or it may contain asbestos. If so, solar may not be a suitable option for your home.

Does solar work on older homes?

Solar is becoming much more common on older homes, and it works very effectively on heritage homes and has big environmental benefits for older properties. To make the most of your solar, it's important to create electricity habits that utilise the most energy during the day.

Can I put solar panels on my roof?

Fortunately, panels can usually be placed on different areas of the roof, or overhanging shade trees can be trimmed to suit the needs of the system without sacrificing the aesthetics of the property. Installing solar on your home can cause older roofs to break or leak.

Where should solar panels be installed on a terraced house?

On terraced houses, because of the limited space, the solar panels will need to be installed either on the front or the back of the property. One thing you should consider when making this decision is not the aesthetics, but the side of the roof that will get the most sun.

Why are solar panels not working in older houses?

Older houses often have established trees which have grown over decades. The problem with tall old trees is that they may overhang the solar during parts of the day or in different seasons. If one cell in a solar panel is covered by shade, the whole string of panels won't work and the solar system will have reduced power.

Do you own solar panels?

You OWN the solar panels. Under these schemes, you pay for solar panels over a fixed period, say 20 years. There are no upfront costs, and instead you pay a monthly fee, which usually covers the solar panel and battery installation, repairs and maintenance.
