

Solar bracket street light

What is solar street lighting?

Solar street lighting refers to street lights that use solar energy for illumination. These systems are particularly suitable for small areas (less than 200 sq ft). Solar street lighting was a promising street lighting option during the first decade of this century and some of these lights are still in operation.

What is a solar street light fixture?

A solar street light fixture is a particular fixture that operates off DC power. Most manufacturers have their line of fixtures and do not work with fixtures outside their main line. This is because extensive testing has been completed, and warranties exist for all components.

What makes up a commercial solar street light?

The components that make up a commercial solar street light are similar to other commercial solar lights. Each light consists of a solar power array, battery backup, DC light fixture, controller, fixture bracket, and a pole.

Do solar lights need brackets?

Brackets are almost always required for solar lighting installations. This is because the solar panel is almost always mounted to the top of the pole and the fixture needs to be mounted lower on the pole. The fixture bracket allows the fixture to mount directly to the same pole and out away from the pole at times.

Are solar LED street lights a good idea?

As a result, solar LED street lights can lower installation costs, reduce the need for tons of wiring, and reduce the maintenance and project costs over the system's life. And since they are independent of the grid, you don't have to worry about problems down the line affecting every light, such as blackouts or breaks in the underground lines.

What size poles do I need for a solar light system?

The poles provided for standard light applications are quite different from what is provided for a solar lighting system. Solar poles are typically very large, with a 4-6" tip and an 8-14" base, and should always be round. Square poles do not allow for mounting the solar panel and fixture in any direction and tie you to four direction orientations.

This complete, professional, solar powered street light system is supplied with a choice of galvanized steel columns. It can be used to illuminate car parks, streets, footpaths, loading docks, public areas and a vast range of other applications.

AE6 Solar LED Street Light: Retrofit easily for exceptional lighting. Up to 4,000 lumens of solar-powered brightness, enhancing urban spaces efficiently. ...
