SunCalc shows the movement of the sun and sunlight-phase for a certain day at a certain place.. You can change the suns positions for sunrise, selected time and sunset see. The thin yellow-colored curve shows the trajectory of the sun, the yellow deposit shows the variation of the path of the sun throughout the year.

Solar panel photography

Solar array mounted on a rooftop. A solar panel is a device that converts sunlight into electricity by using photovoltaic (PV) cells. PV cells are made of materials that produce excited electrons when exposed to light. The electrons flow through a circuit and produce direct current (DC) electricity, which can be used to power various devices or be stored in batteries.

And in those discussions, solar power is at the forefront. But what does it actually look like to use solar panels on a large scale? Aerial photographer Tom Hegen traveled to three countries to take a look for himself. The Solar Power Series is a look at solar plants and the manmade landscape looking to salvage our future.
