What is a solar racking?

The solar rack is the hardware under the solar module that secures the panel to a surface (roof, ground, pole) in the panel installation. If you don't get this right, then forget it-you are just buying yourself years of trouble. In this learning article, we will focus on how to select the proper solar racking.

How long does it take to install a solar racking system?

SolarTown offers all the necessary clamps or cap strips to support your installation. The installation of your solar energy system for your home is going to take 1 or 2 days and you will enjoy solar energy for 25 years or more. But you need to put in the time to design your system, and the solar racking is a critical component of your system.

Can a racking system be used to ground a PV module?

This racking system may be used to ground and/or mount a PV module complying with UL 1703 only when the specific module has been evaluated for grounding and/or mounting in compliance with the included instructions. The system is a non-separately derived system.

How to choose a solar rack?

The first step in evaluating which solar rack to use, you must first evaluate the space available for the home solar panels. Either on the roof, on the ground or on a pole, you need to know the square footage before you begin the selection process. Measure the length and width of the surface on which you intend to place the solar panels.

How do I install a solar stack module?

Insert the end clamps laterally in the pedestal. The end clamps are attached and then tightened at the height of the module frame. Modules should be installed to the Solar Stack pedestals with the manufacturer approved middle/end clamps. There are different types of clamps available for the module installation.

Can solar panels be mounted on a roof?

Overall, the potential problems that come with racking and mounting your solar panels have nothing to do with the weight of the system and what that does to your roof structurally. With the proper racks, mounts and installation, your roof will have no trouble handling the load.
