Adaptive design: With this option, each power station (PS) can have different sizes (power) and different DC/AC ratios, so the design complies with the global parameters set by the user. This allows for power stations with different shapes that better fit the perimeter and irregularities of the site, resulting in more total installed capacity.

The benefit of using concentrated solar power is that it can be stored for 8 to 12 hours after generation, which can help power the emirate through the night. The first phase of the new CSP project should be operational by 2021. Sourced from: Dubai to build world's Concentrated Solar Power project on a single site - WAM

This chapter presents the important features of solar photovoltaic (PV) generation and an overview of electrical storage technologies. The basic unit of a solar PV generation system is a solar cell, which is a P-N junction diode. The power electronic converters used in solar systems are usually DC-DC converters and DC-AC converters. Either or both these converters may be ...
