What is solar energy & how does it work?

Solar energy can be part of a mixture of renewable energy sources used to meet the need for electricity. Using photovoltaic cells (also called solar cells), solar energy can be converted into electricity. Solar cells produce direct current (DC) electricity and an inverter can be used to change this to alternating current (AC) electricity.

How can solar energy be converted into electricity?

Using photovoltaic cells (also called solar cells), solar energy can be converted into electricity. Solar cells produce direct current (DC) electricity and an inverter can be used to change this to alternating current (AC) electricity. This electricity can be stored in batteries or other storage mechanisms for use at night.

How do you store solar energy?

One way to store the solar energy for later use is to use a solar cell to charge something called a capacitor. The capacitor stores the energy as an electric field, which can be tapped into at any time, in or out of light. In this electronics science project, you will use parts of a solar car to experiment with the energy storage...

What are solar science experiments for kids?

Solar Science Experiments for Kids are a fun way to teach children about renewable energy sources. These experiments are geared for children ages 5-10, but may be adapted for all ages. My daughter is getting VERY excited about her upcoming week at science camp!

How do I set up a solar cell experiment?

Set up your experiment, as shown in Figure 1. Set up your lamp a fixed distance from where you will test the solar cell. If you are doing the project outside, set up your experiment in an area with direct sunlight. Connect your multimeter's leads to the solar cell's alligator clip leads.

Experiment with solar power by building your own solar-powered robot or oven or by testing ways to speed up an existing solar car. Or analyze how solar cells or panels work.
