

Solar power generation operating lease

Can a commercial solar PV system be financed with an operating lease?

Financing a commercial solar PV system with an operating lease can deliver long-term energy cost control and clean energy generation on-site.

Why should you lease a solar panel system?

Leasing a solar panel system offers a cost-effective path to adopting renewable energy, ensuring significant savings. With EIC's Lease-to-Own service, you can export excess energy back to the grid and automatically become the full owner of the solar equipment once the lease period ends.

What is a commercial solar operating lease?

A commercial solar operating lease is a great way to go solar without any upfront costs. With a commercial solar operating lease, you simply pay a monthly fee for the solar panels that are installed on your property. The solar panels are owned and operated by the solar company, so you don't have to worry about maintenance or repair costs.

How long does a commercial solar lease last?

The lease term is typically 15-20 years, after which the lessee has the option to purchase the solar panels or have them removed. Commercial solar operating leases are a popular financing option for businesses looking to go green and save on energy costs.

How does a solar lease work?

The lease is structured so that the lessee makes monthly payments to the lessor, which covers the cost of the solar panels and their installation. The lease term is typically 15-20 years, after which the lessee has the option to purchase the solar panels or have them removed.

What is a lease-to-own solar agreement?

Our Lease-to-Own Solar Agreement allows you to enjoy significant cost savings and contribute to reducing carbon emissions. Under this agreement, you will lease the PV solar system for a duration of 10 years, during which you will make fixed monthly payments. You are not required to pay any upfront fees.

Ownership transfer: unlike an operating solar lease, the goal of a capital solar lease is to transfer ownership of the solar panel system to the lessee at the end of the solar lease term. This typically involves a nominal purchase option, such as \$1. ... Irregular Power Generation: solar power generation depends on sunlight. At night or during ...

Large-scale solar farms. Larger solar farms are often funded by institutional investors - and sometimes by governments - as the sheer cost of building them is almost always out of the reach of individuals or communities. Large-scale solar farms usually supplement other forms of generation connected to power grids.
