

Is solar energy a future energy resource?

The utilization of renewable energy as a future energy resource is drawing significant attention worldwide. The contribution of solar energy (including concentrating solar power (CSP) and solar photovoltaic (PV) power) to global electricity production, as one form of renewable energy sources, is generally still low, at 3.6%.

What is the contribution of solar energy to global electricity production?

While the contribution of solar energy to global electricity production remains generally low at 3.6%, it has firmly established itself among other renewable energy technologies, comprising nearly 31% of the total installed renewable energy capacity in 2022 (IRENA, 2023).

What is solar energy research?

It examines the current state of solar power and related academic solar energy research in different countries, aiming to provide valuable guidance for researchers, designers, and policymakers interested in incorporating solar energy into their nation's electricity generation.

Is solar energy a first step towards developing solar energy?

Through a detailed and systematic literature survey, the present review study summarizes the world solar energy status, including concentrating solar power and solar PV power, along with published solar energy potential assessment articles for 235 countries and territories as the first step toward developing solar energy in these regions.

How to design a solar energy conversion system?

The accurate design of a Solar Energy Conversion System (SECS) requires a good understanding of the solar characteristics at the location of interest. For this reason, selecting the right location is crucial, as it impacts not only the technical but also the economic viability of the proposed design.

How has solar PV technology changed in 2022?

It is seen that the global weighted-average LCOE of solar PV technology reduced by about 89 % from 0.445 USD/kWh in 2010 to 0.049 USD/kWh in 2022. It is noticeable that the LCOE of PV technology has dropped into the range of fossil fuel electricity costs since 2014.
