

Solar power lamp problem

How to fix solar lights not working?

Switch your solar light to a different location and see if the problem is fixed. Place it in a location with adequate sunlight during the day and no intervention from other artificial lights at night. So, these were a few common ways to fix Solar lights not working.

Why are my solar lights not working at night?

Your solar lights aren't working at night probably due to depleted batteries, insufficient daily sunlight exposure, or the light sensor being affected by nearby artificial light sources. Where Is the Sensor on Solar Lights? The sensor on solar lights is located on the solar panel or near the LED lights, designed to detect ambient light levels.

Are solar lights faulty?

Solution: The solar light may be faulty. Buying new solar lights may be the answer. When some outdoor solar lights are left outside in the sun for years, they will degrade and need to be replaced. Solar Light Parts Illustration

Why are my solar lights not lighting up?

It sounds simple, but it's an easy detail to overlook. Almost every solar light has an on/off switch, typically located at the back. During the day, the solar panel charges the battery, but if the switch is off, the lights won't turn on when night falls. So, if your solar lights aren't lighting up, the first thing to check is this switch.

What if solar panel is not getting sun light?

If solar panel not getting the required sun light than the LED won't work or can't produce the brightest light as you would have expected. Make sure you place your light at a location where it gets direct sun light.

Why is my solar garden light not working?

Most of the outdoor solar garden lights come with ON/OFF button, and that button needs to be turned ON. In many cases this simple thing is ignored by many people and this is one of the main reasons why your solar light isn't working as expected. There might also be a factory defect and the light doesn't turn ON. 2.
