

Off-grid solar panel wiring. An off-grid solar system kit is just a box of components until you put it all together. It doesn't become a system until the solar panels and batteries are connected to the charge controller and the controller connected to the property.. Only then does this box of parts become a complete off-grid solar system.

Connectors are devices that join two or more cables together. They should be compatible with your solar panels and inverter, and they should be weatherproof and UV-resistant. The most common type of connector used in solar systems is the MC4 connector, which has a male and a female end that snap together securely.
