How do you calculate the number of rooftop solar PV modules?

(22) The numbers of rooftop solar PV modules are determined by the following expressions: (22) Number of rooftop solar PV module = $\frac{\text{PV Peak power}}{\text{Peak power of a PV module}}$ (23) $\text{PV peak power} = \text{Area of a PV array} \times \text{PSI} \times \text{PV}$ where PSI is the maximum radiation intensity taken to be 1000 W/m².

Should government support rooftop solar PV system?

Governments should get involved in providing financial support in terms of subsidy above 25% for procurement and installation of standalone rooftop solar PV system, make it a popular choice and propagate this energy solution. Installation of PV modules on rooftop of the buildings generates electricity for self-consumption and power distribution.

What is a rooftop solar PV installation?

A rooftop solar PV installation comprises of PV panels assembled in arrays, mounting frames to support the panels and secure them to the roof, wiring, inverters, and other components depending on the type of installation. The roof site must be able to accommodate all of these components, which requires examining the following aspects:
