From the start, we streamline customer service for manufacturers, reducing costs and increasing satisfaction. Along the way, we ensure EPCs experience first-round commissioning success. And crossing the finish line, we keep systems running at peak for O& M and asset owners, generating returns they can count on.

**System Design.** When designing a solar system, it is essential to tailor it to align with the property's energy requirements. The solar system design process involves carefully studying how much energy is used, including peak times, seasonal changes, and expected growth. When we look at solar photovoltaic energy, we measure the data in two ways:

Finding an unshaded spot is best, but sometimes shading is unavoidable. Some solar panel systems can minimise the impact of shading using "optimisers". Solar optimisers help improve the overall performance of your solar panel system. So, if one panel is shaded, it doesn't impact how much electricity the other panels can generate.
