Explicit models minimized the gap between the design and operational solar power generation capacities. However, the explicit triple model performed better than the explicit double model due to more extrinsic factors directly impacting solar power generation. It was observed that both the implicit (7.801 MW) and explicit (8.419 - 9.028 MW ...

Prior to the detailed design of a CSP plant, it is necessary to finalize type of the solar field, type of the power-generating cycle, overall plant configuration, sizing of the solar field and the ...
