

## Switch under photovoltaic panel

Essentially, a solar transfer switch ensures that your solar power system is connected to the appropriate power source at all times. When the sun is shining and your solar panels are generating electricity, the switch directs the power to your electrical loads, reducing your reliance on the grid and saving you money on your utility bills.

connected for higher currents. In this manner, several PV-panels form PV-strings. For large systems, a number of these PV-strings are connected in parallel to form a PV-array with a direct-current output equal to the sum of the PV-string out-puts. The panel circuitry can be referred to as the PV-generator
