Are lithium-ion batteries safe for electric energy storage systems?

IEC has recently published IEC 63056 (see Table A 13) to cover specific lithium-ion battery risks for electric energy storage systems. It includes safety requirements for lithium-ion batteries used in these systems under the assumption that the battery has been tested according to BS EN 62619.

What safety standard must lithium batteries meet?

This international standard specifies requirements and tests for the product safety of secondary lithium cells and batteries used in electrical energy storage systems with a maximum voltage of DC 1500 V (nominal). Evaluation of batteries requires that the single cells used must meet the relevant safety standard.

What are the standards for battery energy storage systems (BESS)?

As the industry for battery energy storage systems (BESS) has grown, a broad range of H&S related standards have been developed. There are national and international standards, those adopted by the British Standards Institution (BSI) or published by International Electrotechnical Commission (IEC), CENELEC, ISO, etc.

What are the international standards for battery energy storage systems?

According to Appendix 1, there are international standards for domestic battery energy storage systems (BESSs). When a standard exists as a British standard (BS) based on a European (EN or HD) standard, the BS version is referenced. The standards are divided into the following categories: Safety standards for electrical installations.

What types of batteries can be used in a battery storage system?

Application of this standard includes: (1) Stationary battery energy storage system (BESS) and mobile BESS; (2) Carrier of BESS, including but not limited to lead acid battery, lithium ion battery, flow battery, and sodium-sulfur battery; (3) BESS used in electric power systems (EPS).

What is a battery energy storage system (BESS) Handbook?

This handbook serves as a guide to the applications, technologies, business models, and regulations that should be considered when evaluating the feasibility of a battery energy storage system (BESS) project.
