During this initial consultation, the solar company will: - Assess your energy needs : By reviewing your electricity bills and understanding your consumption patterns, the installer can recommend the right size and capacity of the solar system.

How do you connect solar panels together?

Connecting PV modules in series and parallel are the two basic options, but you can also combine series and parallel wiring to create a hybrid solar panel array. Some solar panels have microinverters built-in, which impacts how you connect the modules together and to your balance of system. What Are They?

How to install off grid Solar System?

Battery is needed in off grid solar system to store electricity backup. Next step is to connect the inverter to the grid. To make this connection, a normal plug is used to connect to the main power switch board. An output wire is connected with electric board that supplies electricity to the home.

How to install solar panels?

The first step is to fix the mounts that will support the Solar Panels. It can be Roof-ground mounts or flush mounts depending on the requirement. This base structure provides support and sturdiness. Care is taken on direction in which the PV panels (monocrystalline or polycrystalline) will be installed.

The required wattage by Solar Panels System = $1480 \text{ Wh} \times 1.3 \dots$ (1.3 is the factor used for energy lost in the system) = 1924 Wh/day . Finding the Size and No. of Solar Panels. $W \text{ Peak Capacity of Solar Panel} = 1924 \text{ Wh} / 3.2 = 601.25 \dots$
