

# Trough solar power generation system design

Can a parabolic trough solar thermal power plant be improved?

Abstract As a promising application of solar energy, parabolic trough solar thermal power generation technology is one of the most important methods of solar thermal utilization. This paper takes the SEGS VI parabolic trough plant as the research object and proposes an improved 300MW parabolic trough solar thermal power plant.

Does trough solar thermal power generation improve plant efficiency?

However, statistics have consistently shown that with the development of trough solar thermal power generation technology, the installed capacity of trough solar thermal power generation has been significantly improved, but the overall plant efficiency is still at a low level.

Do combined solar troughs and tower aided coal-fired power plants utilise solar energy?

Performance analysis of a novel combined solar trough and tower aided coal-fired power generation system studied and exhibit several advantages in the utilisation of solar energy. The issue with safety issues. This study proposes the original combined parabolic troughs and solar fired power plants.

How trough solar thermal power plant structure is based on SEGS VI plant?

Second, based on SEGS VI Plant, an improved trough solar thermal power generation plant structure that uses a sub-region heating scheme is proposed. Third, the subsystems of the 300MW power plant are analyzed and an optimization model for the overall plant efficiency is proposed.

Can combined solar troughs and solar fired power plants contribute?

This study proposes the original combined parabolic troughs and solar fired power plants. Under the same investment condition, the combined solar field can contribute. The simulation results of the combined solar field integrated with a 253.17 and 255.83 g/kWh, respectively. The maximum available solar exergy is 69.43

What is parabolic trough technology?

Parabolic trough technology is currently the most nine large commercial-scale solar power plants, the since 1984. These plants, which continue to operate a total of 354 MW of installed electric generating thermal energy used to produce steam for a Rankine Figure Solar/Rankine 1.

Parabolic trough at a plant near Harper Lake, California. A parabolic trough collector (PTC) is a type of solar thermal collector that is straight in one dimension and curved as a parabola in the other two, lined with a polished metal mirror. The sunlight which enters the mirror parallel to its plane of symmetry is focused along the focal line, where objects are positioned that are ...

The key component of any solar thermal power system is the solar collector, which is responsible for

# Trough solar power generation system design

concentrating the sunlight onto the receiver. There are several different types of solar collectors, including ...

Typical width of such PTC is 0.5-10 m, and the typical concentration factor is in the range of 50-100. The main use of PTC is in solar power generation, but also for process heat in industry. In large-scale concentrating solar power applications, the PTC is the most successful type of concentrating collector design.

In order to verify the feasibility of the tracking control system of the trough type solar thermal power generation device, the power generation capacity of the device was measured. ... Pan Jiaqi, Niu Guoling, Zhang Yanli, Jiang Yongcheng. Design of tracking control system for parabolic trough solar thermoelectric power generation device[J] ...

Parabolic-Trough LCOE Optimization The optimization objective of the parabolic trough system is the minimization of LCOE, this is expressed as: Minimize:  $= (x_1, \dots, x_5, 1 | 1, 2)$  (1) where:  $x_1$  is the solar multiple [19], which essentially dictates the sum of aperture areas of all the mirrors in the solar field  $x_2$  is the number of after-hours operation via thermal storage  $x_3$   $x_4$   $x_5$  Fig. 3 ...

The operation of the parabolic trough solar generation system was modeled and enhanced by Wang 28 under cloudy circumstances. The difference between the exergy ...

Figure 1. Solar/Rankine parabolic trough system schematic [1]. Plant Overview Figure 1 shows a process flow diagram that is representative of the majority of parabolic trough solar power plants in operation today. The collector field consists of a large field of single-axis tracking parabolic trough solar collectors .

11 d Beijing Engineering Research Center of Solar Thermal Power, Beijing, China 100190 12 13 \* Corresponding author: xuershu@mail.iese.ac.cn 14 Abstract 15 In a parabolic trough solar power plant, the steam generation system is the junction 16 of the heat transfer fluid circuit and the water/steam circuit. Due to the discontinuous

The efficiency of a Parabolic Trough (PT) Solar Power Plant heavily relies on its thermal performance. Modern technology has allowed for the creation of more efficient methods of producing steam ...

In addition, a comparison is made between solar thermal power plants and PV power generation plants. Based on published studies, PV-based systems are more suitable for small-scale power ...

However, these energy sources are variable, which leads to huge intermittence and fluctuation in power generation [13, 14]. To overcome this issue, researchers studied the feasibility of adding energy storage systems to this power plant [15, 16]. Concentrated solar power (CSP) is a promising technology to generate electricity from solar energy.

The high-performance EuroTrough parabolic trough collector models ET100 and ET150 have been developed

# Trough solar power generation system design

for the utility scale generation of solar steam for process heat applications and solar power ...

The process of designing a parabolic trough solar field is divided into steps as represented through a flow diagram given in Fig. 1. The explanation is given subsequently for the important steps. Fig.1. Design steps for PTC solar field A. Design Load Basis The system is intended for a industrial drying and baking

Parabolic trough solar technology is the most proven and lowest cost large-scale solar power technology available today, primarily because of the nine large commercial-scale solar power plants that are operating in the California Mojave Desert. These plants, developed by Luz International Limited and referred to as Solar Electric Generating Systems (SEGS), range ...

Evaluation of Parabolic Trough Solar Collector Power Generation System By Mekuannint Mesfin A thesis submitted to the School of Graduate Studies of Addis Ababa University in partial fulfillment of the requirements of the Degree of Masters of Science in Mechanical Engineering (Thermal Engineering Stream) Advisor Dr.-Ing. Ababayehu Assefa

Several studies related to the dynamic simulation of the parabolic trough technology are summarised and discussed in this work. This study is the first research that ...

As the renewable energy technologies continually mature, the modern society realizes that the worldwide electrical energy consumption will be supplied by renewable energy in the future [1], [2].Parabolic trough concentrating solar power (PTCSP) is a promising approach to provide electric power with increased stability and reliability in countries and regions with rich ...

Abstract: In order to improve the solar energy utilization rate and output power of the solar power generation device, this paper takes the parabolic trough thermoelectric generation device as ...

To obtain a more intuitive influence of the energy cascade utilization principle on a trough solar thermal power generation system with a TES, related thermal economic ...

Concentrated Solar Power (CSP) generation is one of the maximum promising candidates for mitigating the destiny power crisis. The extracted energy from CSP technology may be very clean, dependable ...

tracking system with three parabolic trough collectors and a storage tank which is placed above the receivers" pipe level so that the heating fluid can flow naturally without pumping

The design and analysis of Parabolic Trough Solar Thermal Collector (PTSTC) system used to generate hot/steam water for domestic and industrial purposes were carried out. ... Electricity ...

The model provides a theoretical basis for the optimal design of concentrating solar power generation system.
