Voltage specifications of solar photovoltaic panels

It's not the real voltage of the solar panel. You want the maximum power voltage or V_{mp} , which should be listed somewhere in the specs. If we assume the V_{mp} for the 200W solar panel is 20.5V, we can calculate amps this way: $200W/20.5 = 9.7A$. The solar panel produces 9.7 amps at maximum power output. Does more amps mean more power?

Electrical energy conversion of solar photovoltaic (PV) systems is significantly influenced by the PV module temperature, where the overheating of the module leads to a drop in power generation.
