

What to do if you fall into a photovoltaic panel while skydiving

Can skydiving go wrong?

If you're learning to skydive, making a tandem jump or an experienced jumper doing an ordinary jump, it's highly unlikely anything will go wrong. That said, there are still risks involved with all types of skydiving - and we'll talk about how we mitigate that in a moment.

What should I do before skydiving?

Check your jumpsuit for holes or tears. Make sure it fits properly and there is no way for air to enter it. Always try on the suit prior to jumping well in advance, to ensure it is in good condition. Wear a helmet when skydiving. No jump is 100% risk-free and a helmet can go a long way in minimizing injury.

How do you stay safe during a skydive?

The best way to stay safe is to be trained to make the most of every skydive and to cope when things don't go to plan. Skydive training is military in style. By this, we mean there's a lot of repetition and a very regimented approach to ensuring everyone learns what must be learned during their first training, nothing more, nothing less.

How common are skydiving injuries?

Skydiving injuries are more common, though still statistically very unlikely at just 0.55 injuries per 1,000 jumps. Whether you're thinking about skydiving for the first time or you've been doing it for years, you'll want to know that you'll be safe during your jump. As a community, skydivers are highly risk averse.

Are 'normal' skydives safe?

If the skydiver gets this wrong, it can result in injuries or fatality. What this means, in reality, is that 'normal' skydives are usually very safe indeed. If you're learning to skydive, making a tandem jump or an experienced jumper doing an ordinary jump, it's highly unlikely anything will go wrong.

Is tandem skydiving safe?

Tandem skydiving - where you're attached to an experienced skydiving instructor for your jump - has an even better safety rate, with 0.002 fatalities per 1,000 jumps on average over the past 10 years. Statistically, you're more likely to die being struck by lightning or stung by a bee. What are the risks involved?

How fast do you fall when skydiving without a parachute? Photo by Muzammil Soorma on Unsplash.
